

Intelligent Addressable Smoke & Heat Detector

Feature and Benefits

EN54-29 Compliance
LPCB Pending
Smoke and Heat Sensor
Using microprocessor technology with memory capacity
up to 10 events
Analogue sending and digital addressing
Provide real time algorithm to the control panel
Smart linear drift compensation
360-degree visual indicator
Onsite Adjustable Parameter
Removable chamber against dust and small insect
Ancillary remote indicator output
Aesthetically pleasing design

Overview

The TX7120 Intelligent Addressable Optical Smoke & Heat Detector is the ideal device for most applications, due to its spiffing linear response to a wide variety of different types of smoke patterns and combining with heat sensing sensor for temperature response. The unit manufactured base on the sensitivity requirement of EN 54 part 29, European Standard. The unit is aesthetically pleasing with unobtrusive design that will complement modern building designs. The unit incorporates an intelligent processor that provides Algorithm map, inbuilt A/D converter, Drift compensation, and Self-Diagnosis and History log.

Secure and speedy communication through the on-board processor enables the detector to make its own decision, resulting in greater automation. In the event of fire, the integral microprocessor analyses the signal according to factors such as signal strength and rate of increase, then confirms these patterns with the preprogrammed fire scenarios, smoke and heat patterns including rate of rise temperature, for a faster and safer response. Once it is confirmed, the LED indicates the sensor status and parallel sending communication signal to the control panel. The TX7120 detector is compatible to the TX7004 Analogue Intelligent Fire Alarm Control Panel, produced by single manufacture T&A, to avoid addressable communication compatibility problem.
